

HAJ WAX NF

INCI: Emulsifying Wax NF

HAJ WAX NF sets the standard for self emulsifying waxes monographed in the National Formulary. It is the premier nonionic self-emulsifying wax used in the cosmetic and pharmaceutical industries. It is a mild ingredient with a proven safety record and has been used successfully for many years.

CHEMICAL/PHYSICAL PROPERTIES

HAJ WAX NF is a preparation of higher fatty alcohols and represents an emulsifier of the self-bodying type. HAJ WAX NF produces thick, solid emulsions without the addition of stiffening waxes, even at concentrations as low as 5%, although 10% may provide superior stability. HAJ WAX NF emulsions show excellent stability in both acid and base media. Stable emulsions with a pH as low as 3 or as high as 13 can be produced. HAJ WAX NF is compatible with anionic, cationic and nonionic systems, making it a truly versatile product. HAJ WAX NF does not deteriorate on heating, experiencing only a slight alteration in color at temperatures up to 150-152°C for two hours. Under these severe conditions, it may lose 2-3% in weight with slight hardening of the wax.

FUNCTIONS

HAJ WAX NF can be used to produce viscous or thin emulsions, depending upon the concentration at which it is used. At low concentrations of 2-3%, HAJ WAX NF provided optimum emulsion stability supplemented with other emulsifiers.

RECOMMENDED USE LEVELS 2.0% - 10%

FORMULATING WITH HAJ WAX NF

HAJ WAX NF emulsions can be prepared easily by incorporating HAJ WAX NF in the oil phase and then heating it and the water phase separately to 70°-80°C, once the two phases reach this temperature, the water phase is added to the oil phase in a thin stream using mechanical agitation. The emulsion is then stirred down to a temperature above the solidification point of the cream (to 30°C for a lotion). These emulsions are very stable, easy spreading systems, but can be homogenized if desired. A preservative should always be added to protect against bacterial growth.

TYPICAL PROPERTIES

Appearance	Flakes
Color	Creamy White
Odor	Mild, characteristic
pH (0.3% water dispersion)	5.5 - 7.0
Melting point	48-52°C (with decomposition)
Saponification Value	14.0 Max.
Hydroxyl Value	178-192
Iodine Value	3.5 Max
Fatty Alcohol Assay	Proprietary

STORAGE

HAJ WAX NF should be stored in a tightly closed container in a cool, dry place. Storage above 90°F may result in coagulation.

LIMITATIONS

This product is neither tested nor represented suitable for medical or pharmaceutical uses.

LIMITED WARRANTY – PLEASE READ CAREFULLY
